How Angel Saved Us

One morning, the campus web server crashed. Since we do database management using a Microsoft Access database, we were able to create a no-frills listing of the popular databases and load this into Angel. This could also be done to create an on-campus work-around in the event that the proxy server crashes.

The American Chemical Society is the leading publisher of peer-reviewed research journals in the chemical and related sciences, serving scientific communities worldwide through an unparalleled commitment to quality, reliability, and innovation.
- American Science & Technology Abstracts**
Full-text document available online.

Linking in Angel – Proxying made easy

Proxy a URL for Off-Campus Access

Enter the URL to be proxied:
(include http://)

Note: Once a URL is proxied, it will bounce the request through our campus servers, requiring a user to login if they are not on campus. If the proxy server returns a message saying that a file needs to be added to the proxy server, please contact libweb@oneonta.edu and we will take care of the request at our earliest convenience. Also, publicly accessible sites should not be run through the server and will result in an error.

This page is available via our library website and allows for anyone to provide a URL which, through ASP, will be converted to a proxied URL so that faculty, staff, and students can access permanent or persistent article or search links from anywhere on the Internet.
